Chem 103
Sample Examination #1

This exam consists of eight (8) pages, including this cover page. Be sure your copy is complete before beginning your work. If this test packet is defective, ask for another one.

A copy of the Periodic Table will be distributed with the exam on a separate piece of paper. You may use the back side of the Periodic Table as scratch paper. No work on scratch paper will be graded or collected.

DO NOT WRITE BELOW THIS LINE

Part 1 (out of 51):

Part 2. Problem 1 (out of 16):

Part 2. Problem 2 (out of 16):

Part 2. Problem 3 (out of 16):

TOTAL (out of 100):
Part 1. Multiple Choice and Short Response (each question is worth 3 points)

1. Identify which of the following diagrams represents an element, and explain why it is not a compound or a mixture.

(A) 

(B) 

(C) 

(D) 

2. Which of the following properties is extensive, and therefore could not be used in determining the identity of a material?
   (A) density
   (B) shape
   (C) color
   (D) boiling point
3. A sample of an unknown gray metal has a mass of 3.16 g and a volume of 0.550 cm$^3$. Which of the following is a possible identity of the material?
(A) Magnesium, density 1.74 g/cm$^3$
(B) Tin, density 5.75 g/cm$^3$
(C) Gold, density 19.32 g/cm$^3$
(D) Platinum, density 21.45 g/cm$^3$

4. Fill in the missing information in the following table.

<table>
<thead>
<tr>
<th>number of protons</th>
<th>number of neutrons</th>
<th>number of electrons</th>
</tr>
</thead>
<tbody>
<tr>
<td>$^{18}$O atom</td>
<td></td>
<td></td>
</tr>
<tr>
<td>$^{40}$Ca$^{2+}$ ion</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

5. Calculate the molar mass of CuSO$_4$$\cdot$5H$_2$O.

6. Identify these compounds as ionic or molecular.
   a) Ca(OH)$_2$
   b) P$_2$O$_5$
   c) (NH$_4$)$_2$S

7. Name the following compounds:
   Ca(OH)$_2$ ____________________________
   P$_2$O$_5$ ____________________________
   HNO$_3$ ____________________________

8. Write formulas for the following compounds:
   hypochlorous acid
   dinitrogen monoxide
   copper (II) phosphate
9. Write in the correct stoichiometric coefficients to balance the following chemical equation.

\[ \text{____ Na}_3\text{PO}_4 + \text{____ NiCl}_2 \rightarrow \text{____ NaCl} + \text{____ Ni}_3(\text{PO}_4)_2 \]

10. Write and balance the chemical equation for the combustion of cyclohexane (C₆H₁₂).

11. Answer these questions. Be sure to use correct significant figures.
   a) 76.0 cm³ = ? mL
   b) 76.0 mm = ? m
   c) The answer to the problem \( \frac{85.2 - 65.21}{0.005991} \) should have ______ significant figure(s).

12. How many molecules of N₂ are in a 22.8 g sample of N₂? Show your work. Make sure to express your answer with the correct significant figures.

13. Write the symbol of the element that corresponds to each description.
   a) The halogen in period 4 of the Periodic Table is ______
   b) The alkali earth metal in period 3 of the Periodic Table is ______
   c) The noble gas element that has the same electron configuration as the K⁺ ion is ______
14. What charge does each of these elements have when it becomes an ion?
   a) The ion of chlorine has charge ______
   b) The ion of sulfur has charge ______
   c) The ion of magnesium has charge ______

15. What is the percentage by mass of chlorine in KClO₃?

16. A certain hydrocarbon is 92.26% carbon and 7.74% hydrogen. Which of the following is a possible molecular formula for this hydrocarbon?
   (A) C₆H₆
   (B) C₂H₆
   (C) CH₄
   (D) C₃H₈O

17. Consider the two isotopes of chlorine: ^{35}\text{Cl} and ^{37}\text{Cl}.
   a) Name two things that are the same about the two isotopes.
   b) Name one thing that is different about the two isotopes.
Part 2. Problems (16 points per problem)
Make sure to report answers to the proper significant figures. Show all work. Partial credit is possible even if your final answers are incorrect. No credit will be given, even for a correct answer, if no work is shown.

1. Tin has a density of 5.749 g/mL. The water displacement method is used to measure the volume of a blob of tin (diagram with volume measurements shown below). What should the mass be of the tin blob?
2. A solution containing calcium nitrate, $\text{Ca(NO}_3\text{)}_2$, is mixed with a solution containing sodium phosphate, $\text{Na}_3\text{PO}_4$. White calcium phosphate crystals, $\text{Ca}_3(\text{PO}_4)_2$, precipitate from solution, and the remaining solution contains sodium nitrate, $\text{NaNO}_3$.

a) Write and balance the reaction that occurs. Indicate correct phases of each substance, e.g., ($aq$).

b) If 4.923 g of calcium nitrate were in the first solution, what mass of calcium phosphate crystals could be produced?

Extra credit (maximum 5 points)
If 3.123 g of sodium phosphate were in the second solution, which chemical (calcium nitrate or sodium phosphate) is the limiting reactant? Show work to receive credit.
3. The combustion of 1.205 g of a certain hydrocarbon (which does not contain any oxygen) produces 3.874 g of carbon dioxide and 1.322 g of water.

a) Determine the empirical formula of the hydrocarbon.

b) In a separate analysis, it was determined that the original sample of the hydrocarbon represents 0.01467 mol. What is the molecular formula of the hydrocarbon?
