
The exam will be of the usual class time of fifty minutes.

Chapters covered:

1. Chapter 10 fully,
2. Chapter 11 up to page 460 Give it some thought question. Section 11.8 on bonding of solids will be covered as it contains Chem 115 material.

Test Format

1. The test will have about 10 to 12 multiple choice questions.
2. Then there will be three to five short answer questions that can be numerical problems.
3. There will be one or two longer questions, depending upon the length of the other questions.

Remember this is only a guideline. The actual test could be somewhat different.

90% of the questions will be material you have seen either in the text or in the homework. I do pick some questions from the multiple choice practice problems I have posted on the website. But I do not expect you to have completely done those problems.

However I do expect you to have done the entire homework.

I will have questions of a little higher difficulty worth 10% as I told you in the class, so that you work towards earning your A.
