

Chem 115 - Section 1
Spring, 2007
Assignment 7

Reading Assignment

Complete reading Chapter 15. Looking beyond Test 2, you should be reading Chapter 16 (all sections). We will be heavily into this material (acid-base chemistry) before Test 2. It is very important that you pay attention to this material now, even though it will not be covered on the next test. It will, of course, be on Test 3 and the Final Exam.

Test 2

Remember, the second test will be given during regular class time on Wednesday, April 11. It will cover material corresponding to Chapter 14 (except the integrated rate law and half-life of second-order reactions, pp. 589-590) and Chapter 15. Be sure to download the Practice Test 2, Key to Test 2, and Test 2 Study Guide.

Homework Assignment

Complete these problems before coming to your regular discussion section in the week of April 2nd:

Chapter 15: 15.35, 15.37, 15.39, 15.43, 15.45, 15.47, 15.49, 15.51, 15.53, 15.74.

Open Review Sessions

There will be no regular discussion sessions during the week of April 9. However, I will run two review sessions (similar to what I did for Test 1) on Monday at 8:30 in room S/2/62 and 11:30 in room W/1/029. Attendance is entirely optional.
