

Quiz 2  
CHEM 311 Fall 2004

Calculate the pH of a solution prepared by transferring 5.00 ml of 10.00 M formic acid to a 500.00 mL volumetric flask and diluting to the mark with de-ionized water.

$$K_a(\text{formic acid}) = 1.8 \times 10^{-4}$$

$$F_{\text{HFor}} = (5.00 \text{ ml}) \cdot (10.00 \text{ M}) / (500.00 \text{ ml}) = 0.100 \text{ M}$$

$$K_a = [\text{For}^-][\text{H}_3\text{O}^+] / [\text{HFor}] = x^2 / (F_{\text{HFor}} - x) = x^2 / 0.100$$

$$x = [\text{H}_3\text{O}^+] = 0.0042426 \text{ M}$$

$$\text{pH} = 2.37 \text{ (2 sig figs in } [\text{H}_3\text{O}^+], \text{ so 2 sig figs after decimal)}$$

Check Assumptions

$$[\text{OH}^-] = K_w / [\text{H}_3\text{O}^+] = 2.38 \times 10^{-12} \text{ M} = [\text{H}_3\text{O}^+]_{\text{H}_2\text{O}} \lllllll [\text{H}_3\text{O}^+]$$

$$\text{fraction of dissociation} = \alpha_{\text{HFor}} = 0.0042426 / 0.10 = 0.042 = 4.2 \%$$

Assumption are valid!!!!
