# General Aspects

## Pulsed NMR

**FIGURE 3.9** (A) Pulse sequence for a standard  ${}^1\text{H}$  experiment ( $\theta$ ) is a variable radio frequency pulse. (B) shows the effect of various pulse angles ( $\theta$ ) and expected signal. (C) shows the rotation of the signal in the  $xy$  plane after the  $90^\circ$  pulse.

# General Aspects

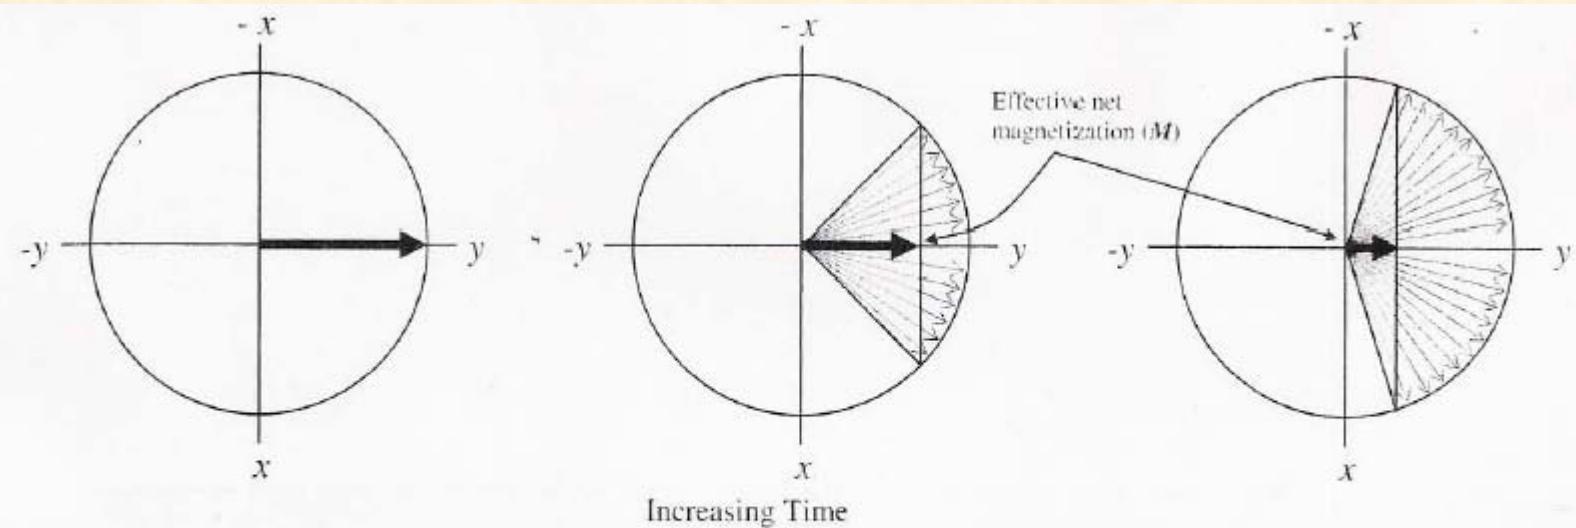

## Relaxation

Spin-Lattice  
Relaxation  
(longitudinal or  $T_1$ )

## Relaxation

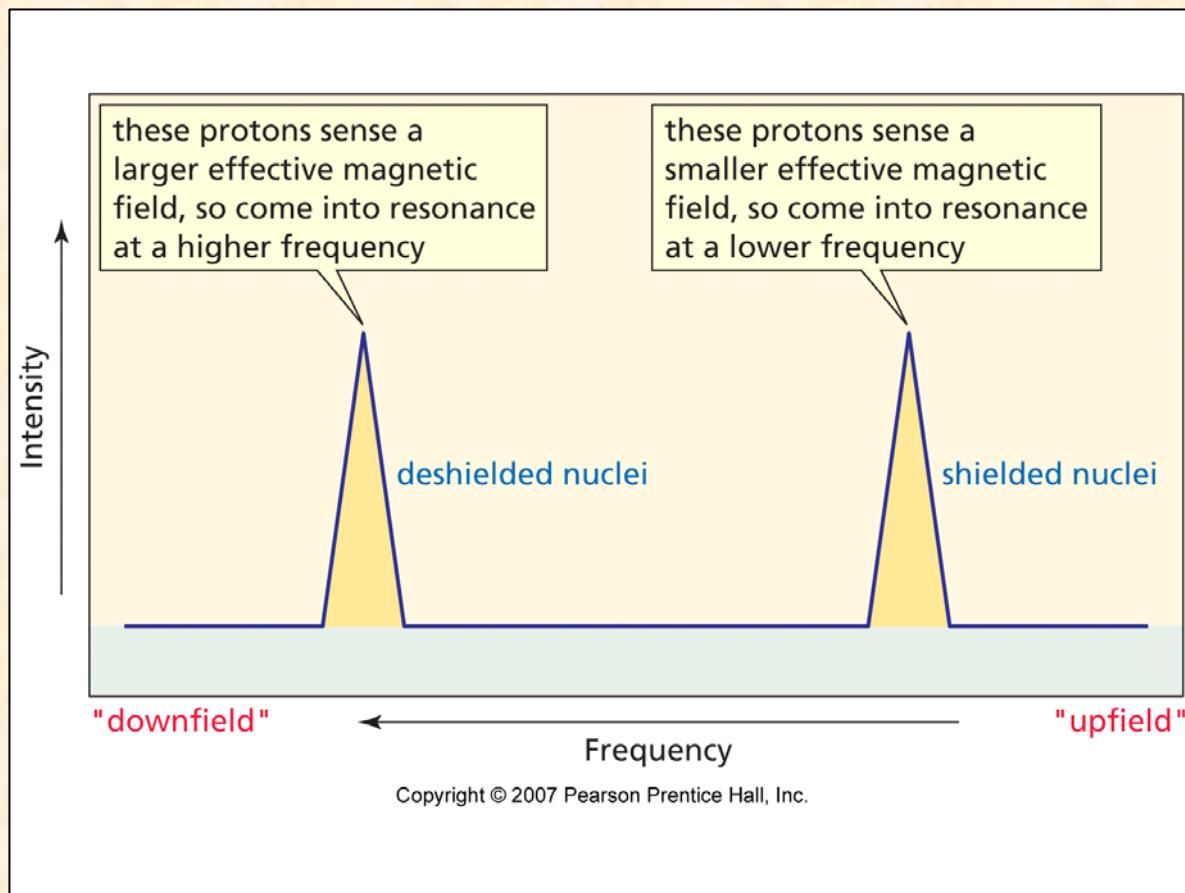

### Spin-Spin Relaxation ( $T_2$ )

**FIGURE 3.10** One spin, rotating at the same frequency as the rotating frame of reference with  $T_2$  relaxation in the  $xy$  plane.  $T_2$  relaxation will dephase or spread the magnetization in the  $xy$  plane, which causes line broadening and decay of the signals.  $T_2$  effects are partially due to inhomogeneous magnetic fields.

## General Aspects – $^1\text{H}$ NMR Spectroscopy

### Chemical Shift

#### PROBLEM 7◆

A signal is seen at 600 Hz downfield from the TMS signal in an NMR spectrometer with a 300-MHz operating frequency.

- a. What is the chemical shift of the signal?
- b. What would its chemical shift be in an instrument operating at 100 MHz?
- c. How many hertz downfield from TMS would the signal be in a 100-MHz spectrometer?

## General Aspects – $^1\text{H}$ NMR Spectroscopy

### Chemical Shift

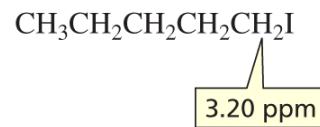

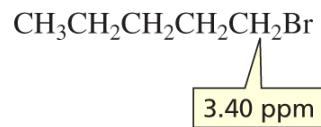

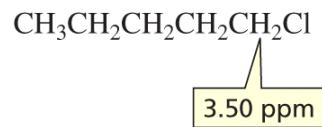

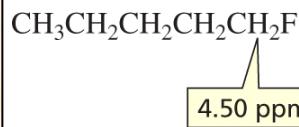

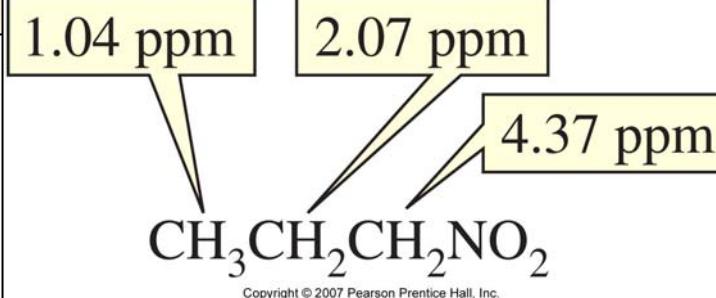

#### PROBLEM 8◆

- a. If two signals differ by 1.5 ppm in a 300-MHz spectrometer, by how much do they differ in a 100-MHz spectrometer?
- b. If two signals differ by 90 Hz in a 300-MHz spectrometer, by how much do they differ in a 100-MHz spectrometer?
