

## Combining Symmetry Operations (Multiplication)

- ☞ Multiplication of symmetry operations is the successive performance of two or more operations to achieve an orientation that could be reached by a single operation.
- ☞ The order in which successive different symmetry operations are performed can affect the result.
- ☞ Multiplication of symmetry operations is *not* in general commutative, although certain combinations may be.
- ☞ In writing multiplications of symmetry operation we use a "right-to-left" notation:

$BA = X$  "Doing  $A$  then  $B$  has the same result as the operation  $X$ ."

- ✓ We cannot assume that reversing the order will have the same result.
- ✓ It may be that either  $BA \neq AB$  or  $BA = AB$ .

- ☞ Multiplication is associative:

$$C(BA) = (CB)A$$

The order of performing  $S_4$  and  $\sigma_v$ , shown here for a tetrahedral  $MX_4$  molecule, affects the result. The final positions in each case are not the same, but they are related to each other by  $C_2$ .

## Multiplication Tables

- ☞ All possible binary combinations of symmetry operations can be summarized in a multiplication table.

	<i>E</i>	<i>A</i>	<i>B</i>	<i>C</i>
<i>E</i>	<i>E</i>	<i>A</i>	<i>B</i>	<i>C</i>
<i>A</i>	<i>A</i>	<i>B</i>	<i>C</i>	<i>E</i>
<i>B</i>	<i>B</i>	<i>C</i>	<i>E</i>	<i>A</i>
<i>C</i>	<i>C</i>	<i>E</i>	<i>A</i>	<i>B</i>

- ✓ Combination order is "top" then "side"; e.g.,

	<i>E</i>	<i>A</i>	<i>B</i>	<i>C</i>
<i>E</i>	$EE = E$	$EA = A$	$EB = B$	$EC = C$
<i>A</i>	$AE = A$	$AA = B$	$AB = C$	$AC = E$
<i>B</i>	$BE = B$	$BA = C$	$BB = E$	$BC = A$
<i>C</i>	$CE = C$	$CA = E$	$CB = A$	$CC = B$

Symmetry elements of  $\text{CBr}_2\text{Cl}_2$ .

## Matrix Notation of the Effects of the Operations

$$[E] \times \begin{bmatrix} \text{Br}_a \\ \text{Br}_b \\ \text{Cl}_a \\ \text{Cl}_b \end{bmatrix} = \begin{bmatrix} \text{Br}_a \\ \text{Br}_b \\ \text{Cl}_a \\ \text{Cl}_b \end{bmatrix}$$

$$[C_2] \times \begin{bmatrix} \text{Br}_a \\ \text{Br}_b \\ \text{Cl}_a \\ \text{Cl}_b \end{bmatrix} = \begin{bmatrix} \text{Br}_b \\ \text{Br}_a \\ \text{Cl}_b \\ \text{Cl}_a \end{bmatrix}$$

$$[\sigma_v] \times \begin{bmatrix} \text{Br}_a \\ \text{Br}_b \\ \text{Cl}_a \\ \text{Cl}_b \end{bmatrix} = \begin{bmatrix} \text{Br}_b \\ \text{Br}_a \\ \text{Cl}_a \\ \text{Cl}_b \end{bmatrix}$$

$$[\sigma'_v] \times \begin{bmatrix} \text{Br}_a \\ \text{Br}_b \\ \text{Cl}_a \\ \text{Cl}_b \end{bmatrix} = \begin{bmatrix} \text{Br}_a \\ \text{Br}_b \\ \text{Cl}_b \\ \text{Cl}_a \end{bmatrix}$$

## Multiplication Table for the Operations of $\text{CBr}_2\text{Cl}_2$

	$E$	$C_2$	$\sigma_v$	$\sigma_v'$
$E$				
$C_2$				
$\sigma_v$				
$\sigma_v'$				

Step 1: Combinations with identity.

	$E$	$C_2$	$\sigma_v$	$\sigma_v'$
$E$	$E$	$C_2$	$\sigma_v$	$\sigma_v'$
$C_2$	$C_2$			
$\sigma_v$	$\sigma_v$			
$\sigma_v'$	$\sigma_v'$			

Step 2: Binary self-combinations.

	$E$	$C_2$	$\sigma_v$	$\sigma_v'$
$E$	$E$	$C_2$	$\sigma_v$	$\sigma_v'$
$C_2$	$C_2$	$E$		
$\sigma_v$	$\sigma_v$		$E$	
$\sigma_v'$	$\sigma_v'$			$E$

## Multiplication Table for the Operations of $\text{CBr}_2\text{Cl}_2$

Step 3: Mixed binary combinations.

$$C_2\sigma_v = ?$$

$$[\sigma_v] \times \begin{bmatrix} \text{Br}_a \\ \text{Br}_b \\ \text{Cl}_a \\ \text{Cl}_b \end{bmatrix} = \begin{bmatrix} \text{Br}_b \\ \text{Br}_a \\ \text{Cl}_a \\ \text{Cl}_b \end{bmatrix}$$

$$[C_2] \times \begin{bmatrix} \text{Br}_b \\ \text{Br}_a \\ \text{Cl}_a \\ \text{Cl}_b \end{bmatrix} = \begin{bmatrix} \text{Br}_a \\ \text{Br}_b \\ \text{Cl}_b \\ \text{Cl}_a \end{bmatrix}$$

This result is the same as that achieved by  $\sigma_v'$  alone:

$$[\sigma_v'] \times \begin{bmatrix} \text{Br}_a \\ \text{Br}_b \\ \text{Cl}_a \\ \text{Cl}_b \end{bmatrix} = \begin{bmatrix} \text{Br}_a \\ \text{Br}_b \\ \text{Cl}_b \\ \text{Cl}_a \end{bmatrix}$$

$$\pencil C_2\sigma_v = \sigma_v'$$

## Complete Multiplication Table

	$E$	$C_2$	$\sigma_v$	$\sigma_v'$
$E$	$E$	$C_2$	$\sigma_v$	$\sigma_v'$
$C_2$	$C_2$	$E$	$\sigma_v'$	$\sigma_v$
$\sigma_v$	$\sigma_v$	$\sigma_v'$	$E$	$C_2$
$\sigma_v'$	$\sigma_v'$	$\sigma_v$	$C_2$	$E$

### General Results:

- ✓ The first row of results duplicates the list of operations in the header row.
- ✓ The first column of results duplicates the list of operations in the label column.
- ✓ Every row shows every operation once and only once.
- ✓ Every column shows every operation once and only once.
- ✓ The order of resultant operations in every row is different from any other row.
- ✓ The order of resultant operations in every column is different from any other column.
