History

Georges Leclanché

1868

1932

Heise and Schudmacher
made commercial product

1970s

Large primary
Zinc-air cells

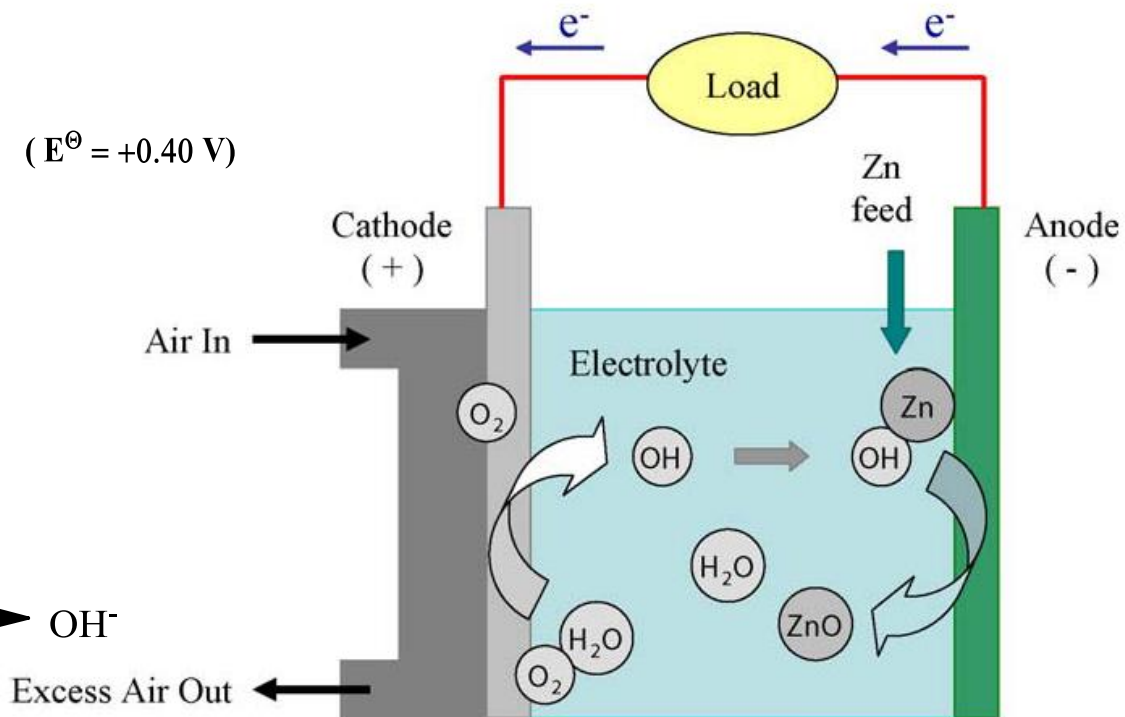

1980s

Hearing aid application

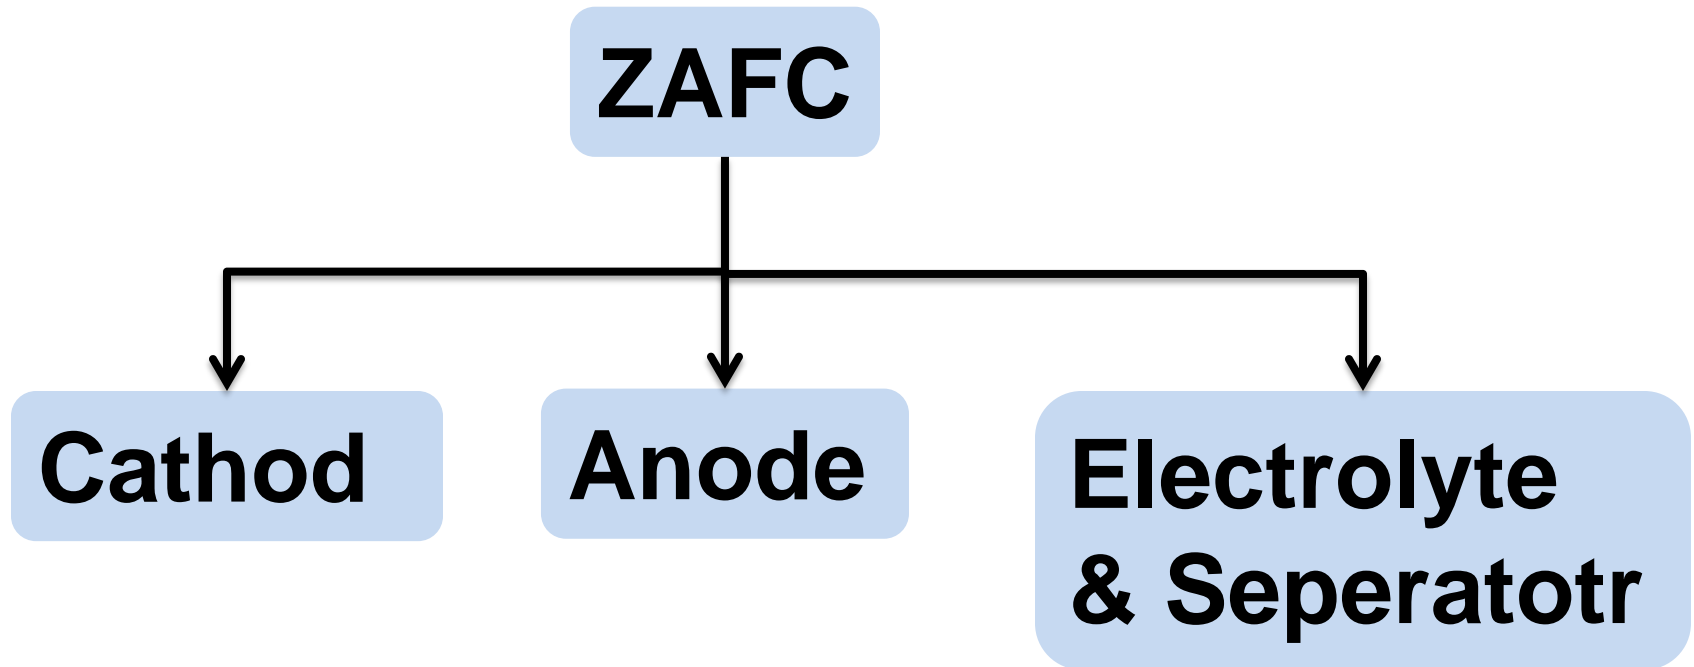

Mechanism

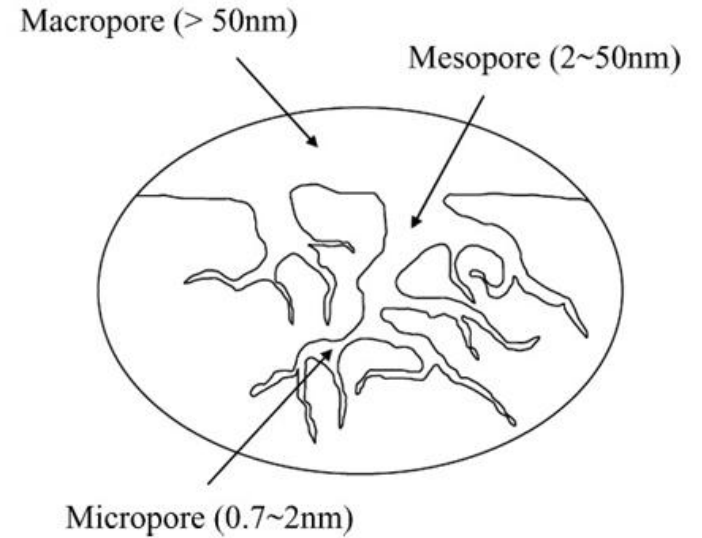

$E_{\text{emf}} = E^\ominus (\text{cathode}) - E^\ominus (\text{anode})$

Materials

Cathod

E.Yeager, *J. Mol Catal.* 38(1986)5

S.-W. Eom et al. *Electrochimica Acta* 52 (2006) 1592–1595

Catalyst

- MnO₂
- Ag
- Metal tetra-methoxyphenyl porphyrine
based ORR catalysts (Fe Co)

MnO₂ based Cathode

- The most common ORR catalyst for primary ZAFCS
- 2 electron pathway
- General design of air cathode

Number	Component
1	Microporous Teflon membrane with high air permeability. It limits the maximum ZAFCS current to 100 mA cm^{-2}
2	Current collector
3	Gas diffusion layer.
4	Catalyst layer (MnO ₂)

Powder Microelectrode

Powder Microelectrode

- Study easily and rapidly
- High reversibility

$$I_d = \frac{nF}{\nu_i} D_i \frac{c_i^0}{\delta_i}$$

$$I = \frac{4nFDc^0}{\pi r}$$

$$\delta = \frac{\pi r}{4}$$

$$\delta = \frac{\pi r}{4} + l$$

Powder Microelectrode

Fig. 3. Steady-state polarization curve measured for an acetylene-black-packed microelectrode ($r_0 = 35 \mu\text{m}$) in 10 mM $\text{K}_3\text{Fe}(\text{CN})_6$ + 1 M KCl solution ($\nu = 2 \text{ mV s}^{-1}$).

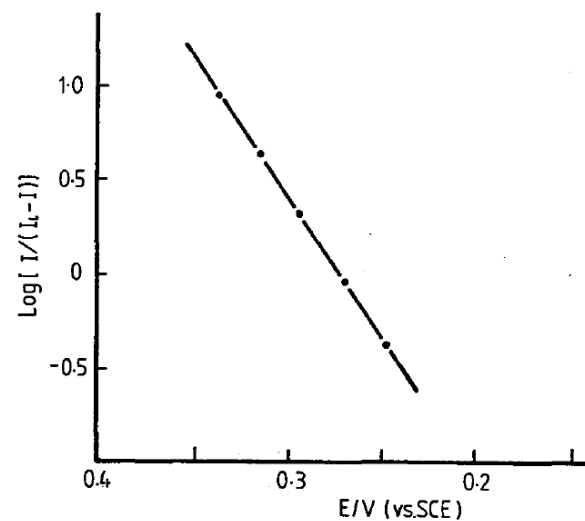

Fig. 4. Tafel plot of the polarization curve shown in Fig. 3.

Powder Microelectrode

Fig. 5. CVs measured at different potential scan rates. Other experimental conditions are as in Fig. 3.

$$I = I_D + I_T = K_D v^{1/2} + K_T v$$

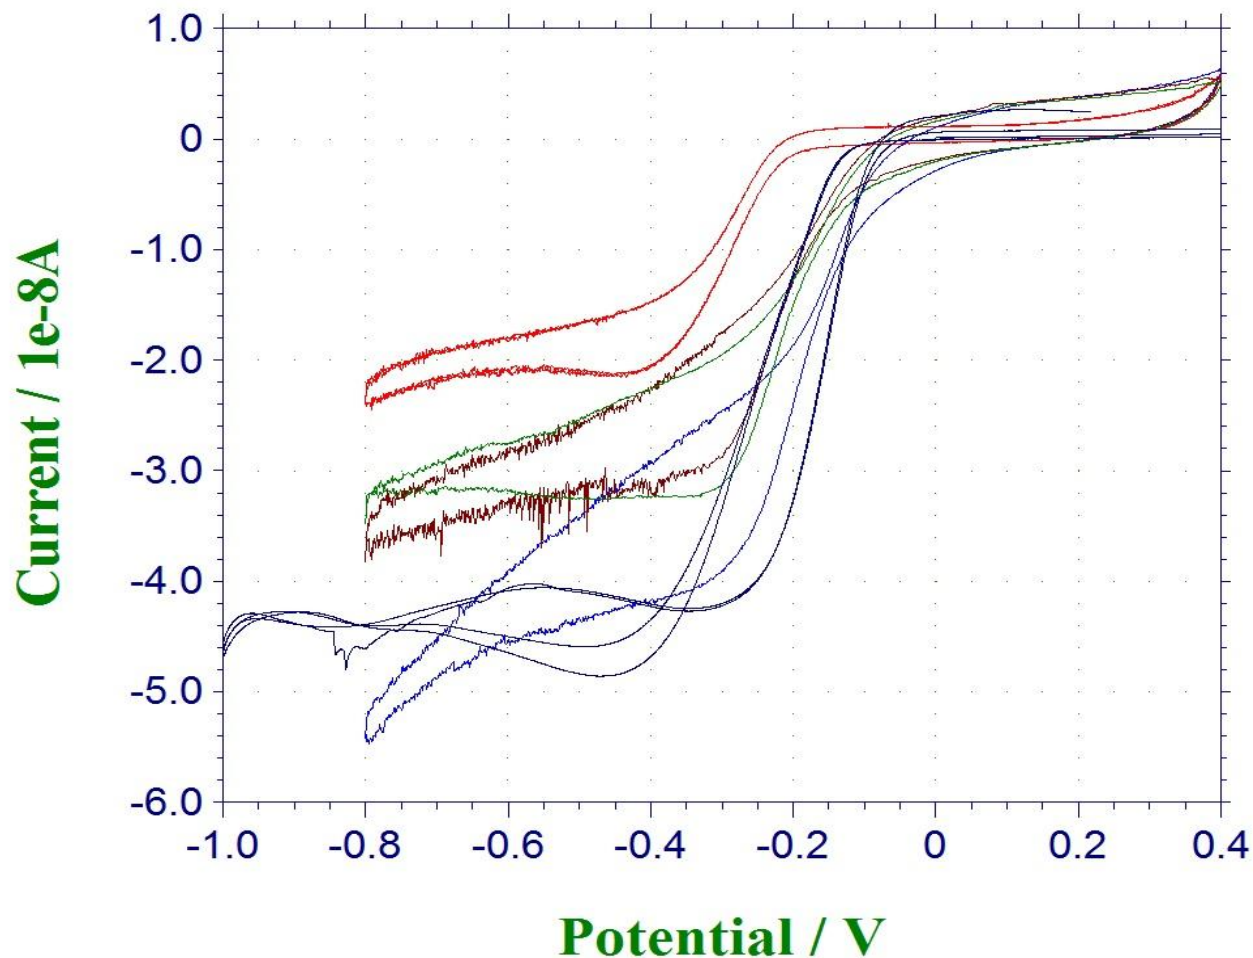

Experiment and Data

Electrode:

- Working Electrode: Pt loaded with activated carbon
- Reference Electrode: Hg/ HgO
- Counter Electrode: Pt wire

Electrolyte: 1M KOH, O₂

Experiment and Data

Oct. 8, 2011 06:46:33
Tech: CV
File: alfa nano Mn2 with

Init E (V) = 0
High E (V) = 0.4
Low E (V) = -0.8
Init P/N = N
Scan Rate (V/s) = 0.001
Segment = 40
Smpl Interval (V) = 0.00
Quiet Time (s) = 0
Sensitivity (A/V) = 1e-7

— alfa nano Mn2 with F
— carbon-3.bin
— beta MnO2 5% with
— gama MnO2 5% with
— Pt 0.01 O2-1.bin

What's next?

- Further characterization such as XRD ICP SEM needed
- To explore the performance of the catalyst in the super capacitor

Thank you!
