This will be the final assignment, due at the beginning of class on Wednesday, December 10th. Do the following problems in Molecular Symmetry and Group Theory: 7.2 a, b, c, d, i; 7.3; 7.4; 7.6; 7.9; 7.15; 7.19. {For 17.9 part (c) the charge on the complex should be 3+; i.e., $[\text{Cr(H}_2\text{O)}_6]^{3+}$}.

I will post the Final Exam on the web site on Wednesday, December 10th, if not sooner. The completed exam will be due in my mailbox (electronic or physical) by 5:00 pm on December 17th. You may use any of your in-class notes; your previous homework assignments; any materials posted on the course web site; or either of the texts for the course. You may not use any other printed or electronic sources, and you may not consult with anyone else. If you have any questions about any of the problems, either email me or see me in my office.
