

Chem 115
Fall, 2006
Assignment 10

Reading Assignment

Complete reading sections 9.1 through 9.8.

Test 3

Test 3 is scheduled for **Monday, December 11**. The test will cover the assigned material from Section 6.4 to the end of Chapter 6, Sections 7.1 through 7.5, and Chapter 8. As usual, I will indicate the cut-off point for the test in lecture. The Sample Test and its Key have been posted. The Study Guide will be posted no later than the week before the test. The tests will be returned on the last day of class, December 13th.

No Test 3 Review Sessions

Unfortunately, there are no opportunities to run review sessions, as we have for the previous two tests. Use the practice test for review purposes, and bring any questions you have to your discussion section the week before the test.

Homework Assignment

The discussion sections for this assignment will be the last of the semester at which attendance is taken. Do the following problems for discussions during the week of December 4th:

8.45, 8.49, 8.51, 8.53, 8.55, 8.61, 8.63, 8.65, 8.84

In addition, do the following problems from Chapter 9. Although this material will not be covered on Test 3, doing these exercises will give you additional practice in writing electron-dot models and will deepen your understanding of the material that will be on Test 3. Of course, this material (molecular shapes) will be an important part of the final exam.

9.15, 9.17, 9.19, 9.21, 9.25, 9.27, 9.29

Final Discussion

There will be a final assignment, covering more of the material in Chapter 9, which we will go over in our final class meeting on December 13.
